

Frontend Developer Intern – Job Description (JD)

Job Title: Frontend Developer Intern

Location: Remote, Nigeria

Team: Product & Engineering Team

Reports to: Senior Fullstack Developer

Type: Internship (Startup Flexible)

About Delovox

Delovox is a modern data intelligence and analytics company helping businesses turn raw data into strategic assets. We empower organizations to grow by delivering data-driven insights, automation, dashboards, and intelligent reporting solutions tailored to their unique needs.

We are building a team of smart, creative, and driven individuals who want hands-on experience and real growth within a fast-rising data startup.

Role Overview

We are looking for a Frontend Developer Intern to support our Senior Fullstack Developer in building, maintaining, and improving Delovox's web products. This role is ideal for a detail-oriented developer who is comfortable working with modern frontend technologies and enjoys translating designs into fast, responsive, and accessible web experiences.

You will work closely with the Senior Fullstack Developer and Product team to implement UI features, maintain and update the company website, and contribute to internal product builds using Next.js, React, and Tailwind CSS.

Key Responsibilities

- Assist the Senior Fullstack Developer in building and shipping frontend features across Delovox's web products.
- Regularly update and maintain the Delovox company website with new content, pages, and improvements.
- Translate Figma/design mockups into clean, responsive UI components using React and Tailwind CSS.
- Build and maintain reusable components within a Next.js project structure.
- Ensure cross-browser compatibility, mobile responsiveness, and accessibility of all frontend output.
- Collaborate with the product and design teams to deliver consistent, high-quality user experiences.
- Participate in code reviews and contribute to frontend best practices within the team.

Ideal Candidate Profile

Skills & Experience

- Currently studying or recently graduated in Computer Science, Software Engineering, or a related field.
- Solid understanding of HTML, CSS, and JavaScript fundamentals.
- Hands-on experience or strong familiarity with React and Next.js.
- Comfortable styling with Tailwind CSS.
- Good understanding of responsive design principles and mobile-first development.
- Ability to read and implement UI designs from Figma or similar tools.
- Strong willingness to learn and grow within a startup environment.
- Good communication skills and ability to work independently in a remote setting.
- Ability to manage tasks, prioritise effectively, and meet deadlines.

Tools Advantageous

- Next.js / React
- Tailwind CSS
- Figma (for reading designs)
- Git & GitHub
- Notion, Trello, or similar task management tools
- Vercel or similar deployment platforms

Key Performance Indicators (KPIs)

- Quality and consistency of frontend code and UI output
- Timely delivery of assigned development tasks
- Frequency and reliability of website updates
- Responsiveness and cross-browser compatibility of delivered work
- Improvement in code quality and adherence to team standards

What We Offer

- Hands-on learning experience in a fast-growing data startup
- Flexible remote working environment
- Real-world exposure to product development and engineering workflows
- Opportunity to build a strong portfolio with live, real-world projects
- Mentorship and growth opportunities working directly with a Senior Fullstack Developer
